## "name of god"

### comprehension

#### read the passage and answer the questions.

The search of alternative sources of energy has led in various directions . many communities are burning garbage and other biological waste products to produce electricity. converting waste products to gases or oil is also an efficient way to dispose of waste. experimental work is being to derive **synthetic** fuels from coal, oil shale, and coal tars. But to date that process has proven expensive. other experiments are underway to harness power with giant windmills. Geothermal power, heat from the earth is also being tested. Some expert expect utility companies to revive hydroelectric power derived from steams and rivers. fifty years ago hydroelectric power provided one third of electricity used in the united states, but today it supplies only  $\xi$  percent the oceans are another potential source of energy. scientists are studying ways to convert the energy of oceans current, tides, and waves to electricity. experiments are also underway to make use of temperature differences in ocean water to produce energy.

\u00e4-which is the best title for the text?

- A- new discoveries in geothermal power
- B- the use of water product for energy
- C- the search for alternative sources of energy
- D- efficient ways of disposing waste

Y- the phrase "synthetic fuel" could be replaced by which of the following?

A- Biological fuel C- Low burning fuel

B- Fast burning fuel D- Artificially made fuel

Υ- The word "it " is refferd to:

A- Potential sources C- ocean power
